

## Read Me First!

This package was created to give a jump start to those who want to produce browser based ePortfolios in their class. It contains templates, navigational aid / java scripts, and other assets to aid in the production.

Much more information can be found at the [Multimedia Resource Center](#) under the Tutorial & Resources > Browser Based Materials.

### Package Contents:

The **Color4webmasters** folder contains a color picker for web materials. To operate, open the index.html within a browser and follow directions.

The **CSS** folder contain bare bones beginning CSS files. One is for san serif fonts, the other is for serif fonts. Each may be added to as needed. There are links to creating CSS navigational menus in the Javascript folder.

The **Documents** folder contains educational papers with definitions, rationales, etc.

In the **Javascript** contains four folders. The dropdown menu folder has numerous drop navigational menus. There are also a list of links to many CSS drop menus.

The **Labeltemplates** has templates for printing paper covers for CD/DVD and other covers.

**Pagelayout** is a group of page templates. These are built using tables. For more information go to the [Multimedia Resource Center](#).

**Shareware** for both Mac and PC is provided to assist in creating buttons, logo, etc.
