

Needed Equipment

Computer

PC minimum of Pentium II with OS Windows XP preferably XP Pro.

Mac should be at least a G3 with an OS 10.2 or later.

Either computer would benefit from a memory upgrade to 512K memory which would speed production. A 60G hard drive should be considered minimum.

Flatbed Scanner

Flatbed Scanners have improved the quality and have been reduced in price in the last few years. For the ePortfolio, scanners should be able to record at 300 to 1200 dpi with a plug-in to go directly to Adobe Photoshop or Photoshop Elements. Photoshop and Photoshop Elements both recognize twain so a direct plug-in might not be necessary.

Digital Camera

A digital camera of at least 3.2 megapixels is a useful tool, however, because the images from any 35 mm film may digitally placed on a CD-rom during the development process, the digital camera could be replaced with any 35 mm camera including a simple disposal camera.

Camcorder

CD/DVD Burner

Color (photo smart) Injet Printer

Software

Adobe Photoshop

Photoshop Elements

Other Image Editor????

iMovie (Mac)

Adobe Premiere Elements (PC)
